Reducing Pollution

By Likhita Muppidi

Did you know that 3 Lake Michigan beaches closed down after the Northwest Indiana Steel Mill Dump and they only realized the harm they had done when they found a bunch of passed out fish? Factories not only hurt marine animals, but also us humans. It pollutes the air we breathe. A few reasons we should lower the use of factory pollution are that some animals go extinct because of factory pollution; it destroys habitats and then animals have no place to live; And, it affects mating rituals. Pollution affects the overall quality of the lives of animals and people.

The first reason is that animals go extinct or go endangered. Sperm Whales, Cory's Shearwater, Pacific Loggerhead Sea Turtle, and a lot more are endangered. They become endangered by eating other animals that live in the ocean like fish, which have consumed plastic or other human waste. For example, a fish might have eaten plastic accidentally, then the animals that ate that fish might also suffer and die. Then, the food chain goes farther down and the last animal that eats the fish also eats toxic waste. That's how much damage water pollution does to innocent animals.

The second reason is that pollution also greatly affects animal habitats. For example, it can poison soil and waterscapes, lead to diseases, and contaminate the air we breathe. Also, did you know that toads' physical behavior can actually change by their air pollution? For instance, when plants grow in the poisoned soil, the plant gets harmful and when an animal eats it, it also has poison in it, and then the food chain goes on and on. Some animals live in places with a lot of plants and the soil gets poisoned by air pollution which hurts the animals. Air pollution does more damage than we think and we have to lower how much gets released.

The last problem with pollution is it results in littering, which in turn ruins habitats and animals. For example, do you know that animals are sometimes caught in plastic bags and end up choking on it? Littering can destroy homes and it's nature all around us. Humans can also experience negative consequences that can impact your life and health. Land pollution has a lot of affects to the world around itself.

In conclusion, a way we can stop this from happening is by lowering the use of pollution in simple ways like using bikes instead of cars for traveling short distances. We can also not litter in the ocean because it goes a long way when the waves pull it to shore, making a big mess. You should try to limit your use of plastic and instead of plastic, you could use steel or glass. Animals are suffering from pollution and we have to help them.

Free Education!

By Ayathi Magesh

I think everyone should have free education. I think education is very important.

One reason I think education is important because I think everyone should have a chance to have a good job. Now let me explain why!

So in most jobs you have to have education and lots of knowledge. You need to go to school to learn about the topic of what job you are going to.

The second reason everyone should have free education is because you need to gain knowledge at school. If you don't go to school, how are you going to know what is around you? And what's happening in the world. You need to know what's happening or else you will do something that you are not supposed to do. And you won't learn rights from wrongs and might get caught for doing something bad.

The third reason is it's not fair you don't get education because you don't have money. Only people who have money can have education is not fair. This means that if you don't have money, you can't gain knowledge. It's really important that everyone gets knowledge. I can help by asking a local library to keep free sessions every day so kids who can't go to school can get at least a tiny bit of education in the library. Also maybe I can talk to my parents about this. That's why free education is important.

Helping Those in Need

By Aarav Vashi

There are people who are in need for necessary stuff. They really need them but they don't have these kinds of things. They need a shelter, bed, food and many more things that they can't afford. We should help these types of homeless and poor people. I want to do that because I want to see less poor people. I want people to be eligible to do things that normal people can do. There would be more people that can afford things that are necessary. I would help people by donating money and give them the necessities needed.

.....

Poverty

By Ashvin Kumar

Have you ever thought of the people in poverty? Well you should probably feel empathy for them. I will tell you what poverty is, three reasons it affects those people, and something you can do to help those people!

First of all, poverty is when people are very poor.

Now let me tell you how poverty affects people. One way it affects people is that they don't have money for school. They have to pay money (since school isn't free everywhere, especially countries with a lot of poverty), something that they can't get enough. Also, They are very very poor. The poverty range in Basking Ridge is about \$863-\$20,000. And just so you know, mostly the people have about \$5,000. Only a few have nearly \$20,000. Lastly, they are not surviving well because they need to save their money and their food will cost a lot if they have a big family and I have heard in India, many people eat out of trash cans!

Now let me tell you one thing you can do to help the people in poverty. You can go to a food shelter and give food or even send money from a donation link or app.

This is what poverty is, 3 reasons it affects people, and something you can do to help those people in poverty.

Don't Use Skimmers

By Avinash Kumar

Don't use Skimmers.

All of them explode in the middle of the ocean and spill toxic oil everywhere. They leave animals in the ocean dying behind while we do nothing to save them. Think about the animals: how they suffer from the oil, their poor eyes shrinking from it. Instead, use the rubber paper and put it around the spill and pull it to shore and bring it somewhere where animals can't reach.

The Gulf of Mexico Oil Spill was the biggest oil spill and almost left one of the penguin species extinct. It even harms us humans' eyesight when it even touches our skin. So both animals and humans will be safe from the 200 gallons of toxic oil. So when we make the mess, let's not just leave it there. Let's clean it up.

Some people might be wondering, why don't the animals clean it up instead of us if it's hurting them? Well, we all know there can't be penguins on a ship cleaning it up. They aren't smart enough to know so they go straight in the oil. So instead of allowing them to walk towards a suicidal death, we have to clean it up because after all, it is our fault that we got it in the water in the first place. So don't let animals suffer from the oil and help them!

.....

Recycling

By Kareena Patel

Recycling is very important in many ways and today we will learn about it and make a change in the world.

Everybody should be recycling because it is saving the world. Did you know that only 7% of the world's plastic is recycled. We need more people to recycle plastic so people can make new things out of it.

Another reason why everybody should recycle is that people are wasting. Some people don't know that trash goes to a landfill and all the trash piles up. In a few years there could be so much landfill we will not have any place to live. The landfill could take over your home. A lot of people throw things at the beach like plastic bottles and once the animals eat it they could die. Many people don't know this but there are actually mini little landfills in the ocean and once the animals eat it they die.

To help with this situation I can make recycling a daily thing that everyone has to do because some people don't recycle which makes the environment bad.

Ways To Stop Bullying

By Lohi Nadella

Hello, My fellow Americans! Today I want to stop bullying.

Some people are being bullied and feel sad. I know that the parents of the kids that are bullied will agree, so my fellow Americans why don't we stop bullying all together. First things first, you have to tell your parents if you are being bullied. Then, if the bully bullies you again, get your friends to back you up so you could tell the bully's parents and the other parents and kids that got bullied by him. This way he won't bully anyone again.

Then if he does bully you again, approach the principal or someone with high authority so he could stop him from bullying, and he can keep an eye on him so the bullying can be stopped immediately. Then, he won't bully anyone but also when he is bullying someone the principal might be walking and see him bully. The principal will give him detention, and that's how you stop bullying. So see you next time fellow Americans!

Global Warming

By Malay Gupta

Did you wonder why the polar ice caps are melting?

People have made factories and throw harmful water in lakes and other bodies of water, which makes the Earth's temperature rise. This is called global warming and is caused by pollution, greenhouse gases, and harmful air. This causes polar ice caps to melt. Certain animals that need a certain temperature are headed toward extinction. Global warming can flood the entire globe because polar ice caps are melting and will release over 1,000,000,000,000 gallons of fresh water!

Global warming can also cause arctic animals to lose their home in Antarctica because Antarctica is slowly melting. It can cause avalanches because melted snow causes the snow to fall and here is a little more information about Global warming: "The increase in Earth's average temperature over a long period of time. Carbon dioxide: A gas released by the burning of coal, natural gas, oil, and wood that traps heat in the atmosphere. Carbon footprint: The amount of carbon dioxide one human releases into the environment in a year."

Ways we can stop global warming is by using renewable energy sources and actually eating the food we buy—and eating less meat will also help. More solutions to global warming include using hybrids instead of depending on cars that run on diesel and gasoline. Now it is up to you to take small steps to stop global warming!

.....

Recycle

By Meghna Srivarshini

I think that we should change the world by recycling because recycling will counteract with pollution. I will be giving a couple of reasons why we should recycle.

My first reason is that we should stop using gas cars and start using energy powered cars. We can help the environment by doing this so if you want to help the environment start using energy powered cars. Gas cars create smoke and smoke can cause diseases. Union of Concerned scientists says "Studies have linked pollutants from vehicle exhaust to adverse impacts on nearly every organ system in the body" (Union of Concerned scientists 1). This shows that smoke can cause many bad things!

Do you want to help sea animals? Well, we can help sea animals by recycling. Did you know that bottles, grocery bags or any type of plastic can suffocate or kill animals? So if you want to help the sea animals you can help them by recycling. Did you know people found a very very sick whale on an island and when they did an x-ray on the whale the whale's body was full

of plastic? And unfortunately, this whale could not live! This shows that we need to help the sea animals by making sure that WE RECYCLE!!!

We can make sure that we recycle by putting recycle bins all around the world and reusing plastic so that then, we can save animals from going to extinction and we can save human lives!!!

Animal Testing

By Sahana Jayathilak

Unfortunately, these days animal testing have become a norm in many countries. Animal testing was first carried out by Aristotle during the Ancient Greeks period. What is animal testing? Animal testing is the use of non-human animals in experiments. It is different from field study because in field study we observe animals from their habitat without harming them. Whereas, in animal testing it's done by forcing the animals to eat or inhale substances.

It is said that testing can't be done without harming these innocent animals because we want to avoid testing on humans directly so this is the best alternative. Most of the beauty products, cleaners and household items kill millions of animals to test their products. Animal testing affects animals because their bodies gets damaged by all the burning and allergic reactions they have to undergo from the chemicals. Frogs, fruit flies, monkeys, rabbits, rats and mice are most commonly used for testing.

Animal testing should be stopped because it is unfair. It is also mean and immoral science. How could we help to put an end to such cruelty? We can all help to end this by avoiding products that have been tested on animals.

A Country Full of Trash

By Siddharth Rayachoti

Do you know how much trash is littered each day in America? If not, I will tell you. About 4.4 pounds of trash is littered per person each day on average, and about 51 billion pieces of trash per year!

I went to the beach last month and noticed that there was littering throughout the entire ocean. Everyone should feel responsible and play their role as decent humans. I am trying to reduce it, but I only get minimal help from my friends and family.

Everyone feels it is just a waste of time and not their responsibility. If everyone thinks like that, then whose responsibility is it? I think there needs to be a law that all kids need to clean litter and if they do a good job, then they should get a badge or be given appreciation. If they clean litter when they are kids, they won't litter when they grow up. There are other ways, but I think this is the best way.
